

## COMPUTER RECYCLING SERVICES

*"1 percent to 4 percent of solid waste is electronic equipment, but the amount is increasing at three times the rate of the other types of garbage."*

-EPA

In today's world, community minded businesses strive to help not only the people, but the environment they live in. Technology has become a part of everyday life, but with it comes waste. Living on an island, our ecosystem is fragile. With limited space for waste disposal, Recycling Programs have become our solution. As of June 1, 2006, the landfill banned the disposal of commercially generated electronic waste.

- Computer CPUs
- Computer Peripherals (Printers, Keyboards, Mice)
- Servers
- Laptops
- Copiers
- Scanners
- Printers
- Cables/Connectors

### Environmental Concerns

Most environmental concerns with computers pertain to monitors containing Cathode-Ray Tubes (CRTs). CRT monitors can contain over five pounds of Lead and other hazardous metals including Mercury, Cadmium and Hexavalent Chromium. Lead is a critical component that protects the users from radiation emitting from the tube, but can be hazardous if the CRT is broken.

All items received by HAZTECH are recycled in an ethical and environmentally sound manner. As our customers, you can be assured that your equipment is being recycled properly and safely in accordance with all state and federal regulations.
